1.0 ENVIRONMENTAL POLICY

Stucchi S.p.A. considers care for the environment to be of prime importance to its company management system.

The Management has decided to commit itself (full compliance with the rules, in conformity with the applicable standards) in force and those undersigned by Stucchi S.p.A. formally to the protection of the environment by consolidating its Environmental Management System in accordance with standard UNI EN ISO 14001:2004.

Stucchi S.p.A.'s employees who work on behalf of the company with Customers and Suppliers must act according to the principles of standard UNI EN ISO 14001:2004 and the additional specific requirements of these, and nothing short of the provisions of the same standard.

This decision requires Stucchi S.p.A.'s specific commitment to the environment during the execution of its activities both within and outside the company.

The objectives of the Environmental Policy are with regard to:

- Ongoing improvement of the environmental services monitored by the Environmental Management System according to specific indicators chosen for assessing their progress.
- The participation, knowledge and expertise of the people who work on the company premises.

The Environmental Policy is applied to generate a constant flow of solutions obtained by:

- **GRIP** on the colleagues and suppliers/Customers to keep them up to date;
A system of communication and relations to ensure the collaboration of all employees, partners and suppliers in the diffusion of and sharing in the environmental culture.
- **GRAB** opportunities to protect the environment and prevent pollution;
Ongoing training of employees aimed at bringing about changes in attitude and conduct on both an individual and a collective level.
- **GROW** in terms of training and educating people in respect for the environment.
Team work to discover one's limitations and correlated risks, and to compensate for these with appropriate actions. Increase environmental awareness among more people.
- **FIT TO COMPETE** Research into and adopt a natural approach that is "environmentally friendly".
The allocation of necessary and sufficient resources for the planning and execution of projects for attaining objectives. A resource is valuable not because of its cost but because of its use.
Ongoing analysis of the activities carried out, to identify all possible forms of environmental impact and to implement appropriate technical, organizational and procedural measures to protect the environment.
Ongoing monitoring of technical development and industrial organization as a whole, with the aim of ensuring care for the environment and lower consumption of natural resources.
Periodic reappraisal by the Management of the suitability and efficiency of the Environmental Management System.
- **STRONGEST LINK** To form strong, long-lasting partnerships with service providers (waste disposal firms, maintenance services for specific plants, etc.) by monitoring the activities carried out on the premises of Stucchi S.p.A. and sharing objectives for mutual development. To work closely with monitoring bodies (local bodies, trade offices, etc.) with transparent communications and prior consultation.
